This book focuses on how biodiversity can be maintained in forested ecosystems, particularly in those forests that are subject to timber harvesting. At the core of the book lies the concept that diversity should be conserved in all its forms, from the smallest microbes to the largest trees, and at all levels of organization, from genes, through to whole ecosystems.

Bing: Maintaining Biodiversity In Forest Ecosystems

Biodiversity refers to the range of life forms and species that exist within a given ecosystem. Different forest types have varying degrees of biodiversity. Tropical rain forests are some of the most biologically diverse ecosystems on the planet. However, even temperate forests consisting of only a few overstory tree species may contain surprising levels of biodiversity when all other life forms found within them are considered (e.g., herbaceous plants, mammals, birds, invertebrates, fungi, etc).
